**STAGE 1**

5 micron polypropylene sediment pre-filter to extract suspended materials.

**STAGE 2-3**

Double NSF carbon block filters to absorb heavy chlorine by-products such as chloramine, THM, and TCE. The double carbon briquettes filter out organic matter from water without release of carbon fines. The carbon block prepares water to enter the reverse osmosis element.

**STAGE 4**

High rejection (95-99%) NSF Thin Film Composite RO Membrane 800 GPD to reject a wide spectrum of impurities including Total Dissolved Solids (TDS), heavy metals, microplastics, PFAs, "forever chemicals," bacteria & viiruses.
